Authorization for this examiner's amendment was given in a telephone interview with Philip R. Poh (registration no. 51,176) on July 14th, 2009.

In the claims:

Please amend claims 1 and 28 as follows:

1. (Currently Amended) A system, ~~functionally associated with a plurality of client nodes,~~ comprising:

a plurality of client nodes, wherein each of the plurality of client nodes comprises a memory and a processor; and

one or more processors that provide initiate a video conference from an instant message request, the one or more processors comprising:

an instant messaging server for supporting instant messages between the plurality of client nodes;

a second server for supporting video conferences between the plurality of client nodes; and

a video conference allocator for setting up and managing video conferences on the second server, wherein the video conference allocator is configured to:

receive [[a]] the instant message request, from one of the plurality of client nodes via the instant messaging server, for [[a]] the video conference, wherein the instant message request is received over a first communication channel opened between the

video conference allocator and the instant messaging server, and wherein the instant message request invites one or more of the plurality of client nodes;

in response to receiving the instant message request, determine conference information for the one of the plurality of client nodes and the one or more invited client nodes of the plurality of client nodes, wherein the determined conference information includes a communication mode associated with each of the one or more invited client nodes of the plurality of client nodes;

initiate the video conference by transmitting the determined conference information to the second server over a second communication channel between the video conference allocator and the second server; and

communicate to the one or more invited client nodes of the plurality of client nodes, via the first communication channel opened between the video conference allocator and the instant messaging server, an instant message to join the video conference[.];

wherein the communication mode is embedded in the instant message request such that the video conference is set up between the one of the plurality of client nodes and each of the invited client nodes of the plurality of client nodes using the communication mode ~~is automatically configured to join the video conference using the instant message.~~

28. (Currently Amended) A communication method, comprising:

initiating a video conference between a plurality of client nodes using an instant message request, wherein the initiating further comprises:

providing an instant messaging server for supporting instant messages between the plurality of client nodes;

providing a second server for supporting video conferences between the plurality of client nodes; and

providing a video conference allocator for setting up and managing video

conferences on the second server, wherein the video conference allocator:

receives ~~[[a]]~~ the instant message request, from one of the plurality of client nodes via the instant messaging server, for ~~[[a]]~~ the video conference, wherein the instant message request is received over a first communication channel opened between the video conference allocator and the instant messaging server, and wherein the instant message request invites one or more of the plurality of client nodes;

in response to receiving the request, determines conference information for the one of the plurality of client nodes and the one or more invited client nodes of the plurality of client nodes, wherein the determined conference information includes a communication mode associated with each of the one or more invited client nodes of the plurality of client nodes;

initiates the video conference by transmitting the determined conference information to the second server over a second communication channel between the video conference allocator and the second server; and

communicates to the one or more invited client nodes of the plurality of client nodes, via the first communication channel opened between the video conference allocator and the instant messaging server, an instant message to join the video conference~~[[.]]~~;

wherein the communication mode is embedded in the instant message request such that the video conference is set up between the one of the plurality of client nodes and each of the invited client nodes of the plurality of client nodes using the

~~communication mode is automatically configured to join the video conference using the instant message.~~

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The primary reason for allowing the claims 1-56 is because the prior art made of record fails to teach and/or suggest:

“A system and a method comprising:

a plurality of client nodes, wherein each of the plurality of client nodes comprises a memory and a processor; and

one or more processors that initiate a video conference from an instant message request, the one or more processors comprising:

an instant messaging server for supporting instant messages between the plurality of client nodes;

a second server for supporting video conferences between the plurality of client nodes; and

a video conference allocator for setting up and managing video conferences on the second server, wherein the video conference allocator is configured to:

receive the instant message request, from one of the plurality of client nodes via the instant messaging server, for the video conference, wherein the instant message request is received over a first communication channel opened between the video conference allocator and the instant messaging server, and wherein the instant message request invites one or more of the plurality of client nodes;

in response to receiving the instant message request, determine conference information for the one of the plurality of client nodes and the one or more invited client nodes of the plurality of client nodes, wherein the determined conference information includes a communication mode associated with each of the one or more invited client nodes of

the plurality of client nodes;

initiate the video conference by transmitting the determined conference information to the second server over a second communication channel between the video conference allocator and the second server; and

communicate to the one or more invited client nodes of the plurality of client nodes, via the first communication channel opened between the video conference allocator and the instant messaging server, an instant message to join the video conference;

wherein the communication mode is embedded in the instant message request such that the video conference is set up between the one of the plurality of client nodes and each of the invited client nodes of the plurality of client nodes using the communication mode”.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
